ABSTRACT

In a communication terminal using UIM, when a message disabling use of a content is received not by a communication terminal containing the content to disabled, but by another communication terminal containing the same content, the content stored in a storage unit of the communication terminal which has received the message is not disabled. Mobile phone 100-1 using UIM stores a program in correlation with a telephone number stored in the UIM. When mobile phone 100-1 receives a management message to delete a program, mobile phone 100-1 interprets the content of the management message. Mobile phone 100-1 obtains a telephone number from the UIM, and deletes the content stored in correlation with the telephone number according to the management message interpreted.
